CLAIMS

We claim:

- 1. A microscope slide composition comprising:
- a) a substrate with a surface comprising discrete sites, said sites separated by a distance of less than 50 μ m, wherein said substrate is formatted to the dimensions of a microscope slide; and
- b) a population of microspheres comprising at least a first and a second subpopulation, wherein said first subpopulation comprises a first bioactive agent and said second subpopulation comprises a second bioactive agent wherein said microspheres are randomly distributed on said surface.
- 2. A composition according to claim 1, wherein said sites are separated by a distance of less than 25 μm .
- A composition according to claim 1, wherein said sites are separated by a distance of less than 15 μm.
 - 4. A composition according to claim 1, 2 or 3, wherein said sites are separated by a distance of at least about 5 μ m.
 - 5. A microscope slide composition comprising:
 - a) a substrate with a surface comprising discrete sites, wherein said substrate is formatted to the dimensions of a microscope slide;
 - b) a population of microspheres, comprising at least a first and a second subpopulation, wherein said first subpopulation comprises a bioactive agent and said second subpopulation does not comprise a bioactive agent, wherein said microspheres are randomly distributed on said surface.
 - 6. The composition according to claim 1 or 5, wherein the distance between centers of a first and second microsphere of said first subpopulation is at least 5 μ m.
 - 7. The composition according to claim 6, wherein the distance between said first and second microsphere of said first subpopulation is less than about 100 μ m.
 - 8. A composition according to claim 1 or 5, wherein said substrate further comprises first and second assay locations, wherein said first and second subpopulations are distributed in said first and second assay locations.
 - 9. A composition according to claim 8, wherein the distance between a first and second microsphere of said first subpopulation is less than about 100 μ m.

- 10. A composition according to claim 9, wherein the distance between a first and second member of said first subpopulation is less than about 50 μ m.
- 11. A composition according to claim 9, wherein the distance between a first and second member of said first subpopulation is less than about 15 μm.
- 12. A composition according to claim 9, 10 or 11, wherein the distance between said first and second member of said first subpopulation is at least about 5 μm .
- 13. A composition according to claim 5, wherein said second subpopulation comprises a detectable signal.
- 14. A composition according to claim 5, wherein said second subpopulation does not comprise adetectable signal.
 - 15. An apparatus comprising:

5

10

20

25

30

35

- a) a detection instrument; and
- b) the composition according to claim 1 or claim 5, wherein said composition is in said instrument.
 - 16. A method for making a microscope slide composition comprising:
 - a) providing a substrate with a surface comprising wells, wherein said substrate is formatted to the dimensions of a microscope slide;
 - b) randomly distributing microspheres on said substrate such that individual wells comprise microspheres, wherein said microspheres comprise at least a first and a second subpopulation, wherein said first subpopulation comprises a bioactive agent and said second subpopulation does not comprise a bioactive agent.
 - 17. The method according to claim 16, wherein said first subpopulation further comprises first and second sub-sub-populations, each comprising a first and second bioactive agent, respectively.
 - 18. A method for making a microscope slide composition comprising:
 - a) providing a substrate with a surface comprising discrete sites, said sites separated by a distance of less than 50 μ m, wherein said substrate is formatted to the dimensions of a microscope slide; and
 - b) randomly distributing population of microspheres comprising at least a first and a second subpopulation, wherein said first subpopulation comprises a first bioactive agent and said second subpopulation comprises a second bioactive agent.

19. The method according to claim 18 wherein said wells are separated by a distance of less than 25 μm .

t

- 5 20. The method according to claim 18, wherein said wells are separated by a distance of less than 15 μm .
 - 21. The method according to claim 18, wherein the ratio of said first and said second subpopulation is at least 1: 36.
 - 22. The method according to claim 18, wherein the ratio of said first and said second subpopulation is at least 1: 100.
- 23. The method according to claim 18, wherein the distance between the centers a first and second
 microsphere of said first subpopulation is at least 5 μm.
 - 24. The method according to claim 18, wherein the distance between the centers of a first and second microsphere of said first subpopulation is at least 15 μ m.
- 25. The method according to claim 18, wherein the distance between a first and second microsphere of said first subpopulation is at least 50 μm.
 - 26. A method of making microscope slide arrays comprising:

10

25

30

- a) providing a substrate comprising at least first and second holes, wherein the diameter of said first and second holes is of a diameter equal to the diameter of a first and second fiber optic bundle, respectively;
- b) inserting said first and second fiber optic bundles into said first and second holes, respectively; and
- c) cutting said substrate such that the cross section of said first and second fiber bundles is framed by said substrate.
